The global ITX PC Cases market size is expected to reach \$ 3007 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

In 2025, global ITX PC Case production reached approximately 17.68 million units, with an average global market price of around US\$95 per unit.

The gross profit margin of major companies in the industry is between 22%–38%.

In 2025, the global production capacity of ITX PC cases was approximately 23.57 million units.

ITX PC Cases are compact computer enclosures designed to accommodate Mini-ITX motherboards and related components in a small form factor. These cases emphasize space efficiency, thermal management optimization, and aesthetic design while supporting high-performance hardware. ITX PC cases are widely used in gaming PCs, home entertainment systems, compact workstations, and space-constrained computing environments where portability and design appeal are important.

The industrial chain of ITX PC Cases includes upstream steel, aluminum panels, tempered glass, fasteners, and surface treatment materials. The midstream focuses on structural design, sheet metal processing, CNC machining, painting, and assembly. Downstream applications cover gaming PC assembly, DIY computer markets, consumer electronics retail, and system integrators, supported by distribution channels and after-sales services.

The ITX PC case market is driven by growing demand for compact, high-performance

computers among gamers and professional users. Trends toward minimalist setups, space-saving designs, and portable computing systems support adoption of small form factor cases. Advances in thermal design, modular layouts, and material quality improve compatibility with high-end components. The expansion of DIY PC building and boutique gaming systems further fuels demand. Overall, the market is expected to grow steadily as consumers seek powerful computing solutions in smaller and more aesthetically refined enclosures.
