According to our (Global Info Research) latest study, the global IVD Antibodies market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

In vitro diagnostics tests are used in laboratories, healthcare settings or directly by consumers at home for the detection of various diseases, infections and other medical conditions. Various companies in the IVD antibodies market are focusing on mergers and acquisitions with regional players. For example, in Sep. 2018, Summa Equity AB acquired Turku-based HyTest Ltd. whose regional presence in the U.S. and Asia is good. Continuously evolving nature of IVD antibodies market further expected to get maximum traction. Superior capability of the IVD antibodies to detect complex diseases such as cancer and use of IVD antibodies in therapeutic monitoring, evaluating blood safety before transfusion further makes it preferred choice of diagnosis test.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic

has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
