## Abstracts

According to our (Global Info Research) latest study, the global IVD (In Vitro Diagnostic) Raw Materials market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

IVD raw materials refer to the core raw materials used in the reaction system of in vitro diagnostic (IVD) reagents, such as the core reaction system, signal system, reaction system carrier, reaction environment, etc. These raw materials are usually used to manufacture in vitro diagnostic reagents, such as antigens, antibodies, diagnostic enzymes, etc., and various fine chemical raw materials, such as sodium chloride, sodium carbonate, various amino acids and organic acids, etc.

With the continuous development of in vitro diagnostic technology, IVD raw materials are also continuously improved and improved. The following are the development trends of IVD raw materials:

**New labeling reagents:** With the development of nanotechnology, new labeling reagents such as nanoparticle labeling reagents, quantum dot labeling reagents, etc. are gradually used in the field of in vitro diagnostics. Their advantages include high sensitivity, good stability, and multiple labeling.

**Microfluidic technology:** Microfluidic technology is a method of migrating the sample analysis process into tiny flow channels, which can achieve high-throughput, fast, and automated diagnostic testing. Microfluidic technology can also reduce the consumption of samples and reagents, saving costs.

**Genetic testing:** With the deepening understanding of gene variation, the application of genetic testing in in vitro diagnosis is becoming more and more extensive. The development of next-generation sequencing technology makes genetic testing faster and more accurate, and can detect multiple genes at the same time, providing better means for personalized diagnosis and treatment.

**Biomolecular markers:** Biomolecular markers are an important basis for disease prevention, diagnosis, and treatment. Therefore, the identification and detection technology of biomolecular markers has attracted more and more attention. In the future, with the continuous development of biotechnology, more biomolecular markers will be discovered and applied in clinical diagnosis.

**Personalized Medicine:** As medical technology continues to evolve, so does the need for personalized medicine. Personalized medicine depends on accurate diagnosis and treatment methods, so the demand for in vitro diagnostic reagents will continue to increase.

To sum up, with the continuous development of science and technology, IVD raw materials will continue to improve and improve, providing better support for the development of the field of in vitro diagnostics.
