To address the challenges associated with *in vitro* diagnostic (IVD) reagent clinical trials?specifically, inconsistent protocol design, cumbersome ethical review processes, and variable data management quality?specialized clinical trial services for IVD reagents have emerged. Since national drug regulatory authorities issued guiding principles and registration regulations for IVD reagent clinical trials, the field of medical device clinical trials has experienced significant growth. Currently, IVD clinical trial services have evolved into a comprehensive suite of offerings encompassing trial protocol design, ethical review consultation, subject recruitment management, sample collection and testing execution, data entry and statistical analysis, and clinical trial report writing. Widely applied in fields such as early cancer screening, infectious disease detection, genetic disease diagnosis, chronic disease management, and reproductive health, these services constitute a professional technical platform that systematically ensures clinical trial compliance, data integrity and reliability, and accelerated product registration.
