According to our (Global Info Research) latest study, the global IVIg Liquid market size was valued at USD 13600 million in 2023 and is forecast to a readjusted size of USD 21540 million by 2030 with a CAGR of 6.8% during review period.

Intravenous immunoglobulin (IVIg) contains the pooled immunoglobulin G (IgG) immunoglobulins from the plasma of approximately a thousand or more blood donors. Most liquid IVIg preparations currently on the market are adjusted to 5% or 10% total protein.

The market growth can be attributed to several factors. Firstly, the increasing prevalence of bleeding disorders, driven by factors such as genetic predisposition, aging population, and improved diagnostic capabilities, has fueled the demand for coagulation factor products. Additionally, advancements in recombinant DNA technology and biotechnology have enabled the development of highly purified and more effective coagulation factor concentrates, offering improved treatment options for patients. Furthermore, the rising awareness about bleeding disorders and the availability of comprehensive treatment programs have contributed to increased diagnosis rates and access to coagulation factor therapies. Improved reimbursement policies and healthcare infrastructure have also played a role in expanding market reach.
