According to our (Global Info Research) latest study, the global Ivosidenib market size was valued at USD 180.4 million in 2023 and is forecast to a readjusted size of USD 247 million by 2030 with a CAGR of 4.6% during review period.

Ivosidenib is an experimental drug for treatment of cancer. It is a small molecule inhibitor of IDH1, which is mutated in several forms of cancer.

Ivosidenib's market driver is its efficacy in treating relapsed or refractory acute myeloid leukemia (AML) with IDH1 mutations. It inhibits the mutated IDH1 enzyme, leading to remission. The niche target population and limited treatment options contribute to its growth. However, challenges include potential side effects, the need for genetic testing to identify eligible patients, and competition from other AML therapies. Despite challenges, Ivosidenib's promising results and ongoing research in AML with IDH1 mutations present opportunities for market expansion.
