The global Jail Management System (JMS) market size is expected to reach \$ 2357 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

The Jail Management System (JMS) is a comprehensive information management platform designed for regulatory agencies, detention centers, and prisons. It aims to achieve comprehensive digital management of inmates, prison facilities, security systems, visitor management, and case processes. The system typically includes modules for personnel file management, access monitoring, scheduling, video linkage, health records, and legal document processing, and supports data integration with external systems such as those of public security bureaus, courts, and procuratorates. JMS solves the problems of information silos, data lag, high human error rates, and significant security risks inherent in traditional prison management, achieving standardization, informatization, and intelligentization of regulatory processes, and significantly improving management efficiency and security levels.
