## Abstracts

The global Jasmine Oil market size is expected to reach \$ 1613 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Global sales of jasmine oil reached 854 tons in 2025, with an average price of US\$1253/kg.

Jasmine oil is a sweet-smelling substance that is made from the flowers of the jasmine plant (*Jasminum officinale*). Widely used in aromatherapy, this type of essential oil contains the plant's aromatic compounds which are believed by some to have various health benefits including skin care and stress reduction.

The raw material for jasmine oil is the semi-open fresh flowers of *Jasminum sambac*\* or *J. grandiflorum*\* of the Oleaceae family. The main producing areas are India, Egypt, Morocco, and Guangxi and Yunnan provinces in China. The flowers must be hand-picked from dusk to dawn. Only 0.2-0.3 kg of absolute can be obtained from 1 ton of fresh flowers. The purchase price of flowers fluctuates between 15-25 RMB/kg depending on the season, and raw material costs account for 60-65% of the ex-factory price. Processing uses solvent extraction (petroleum ether/hexane) to obtain a concrete, followed by alcohol dewaxing, concentration, and filtration. Solvent recovery, energy consumption, labor, and testing account for 25-30%. Therefore, a 10% fluctuation in flower prices can directly translate to a 6-7% change in essential oil prices, and the 20-30% premium for high-quality flowers from Egypt and Grasse further increases the cost of high-end products.
