## Abstracts

According to our (Global Info Research) latest study, the global Jet Bridge market size was valued at USD 689.5 million in 2023 and is forecast to a readjusted size of USD 1058.6 million by 2030 with a CAGR of 6.3% during review period.

A jet bridge is an enclosed, movable connector which most commonly extends from an airport terminal gate to an airplane, and in some instances from a port to a boat or ship, allowing passengers to board and disembark without going outside or being exposed to the elements. Depending on building design, sill heights, fueling positions, and operational requirements, a jet bridge may be fixed or movable, swinging radially and/or extending in length.

Jet bridges provide all-weather dry access to aircraft and enhance the security of terminal operations. They are often permanently attached at one end by a pivot (or rotunda) to the terminal building and have the ability to swing left or right. The cabin, at the end of the loading bridge, may be raised or lowered, extended or retracted, and may pivot, to accommodate aircraft of different sizes. Jet bridges are occasionally used at smaller, single-story airports. This is accomplished by a flight of stairs and, in some instances, a wheelchair lift. In this scenario, a passenger proceeds through the gate and then up a flight of stairs to meet the height of the jet bridge.

The Global Info Research report includes an overview of the development of the Jet Bridge industry chain, the market status of Small Airport (Apron Drive Jet Bridge, Nose-loader Jet Bridge), Medium Airport (Apron Drive Jet Bridge, Nose-loader Jet Bridge), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Jet Bridge.
