Abstracts

The global Jet Nebulizer market size is expected to reach \$ 2338 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

A jet nebulizer is a medical respiratory device that converts liquid medication into aerosol particles through compressed air or oxygen, allowing patients to inhale medication directly into the lungs for the treatment of asthma, chronic obstructive pulmonary disease (COPD), bronchitis, and other respiratory conditions. It is widely used in hospitals, clinics, and homecare environments due to its affordability and compatibility with various liquid formulations. From a value chain perspective, upstream includes medical-grade plastics, compressors, valves, tubing, and atomization components; midstream focuses on device assembly, airflow calibration, aerosol particle size control, sterilization, and regulatory certification; downstream demand comes from hospitals, outpatient clinics, emergency care units, and home healthcare users. In 2025, the average selling price of jet nebulizers is approximately US\$42 per unit, with global sales volume reaching around 38 million units. The industry maintains a gross margin of 30%-48%, supported by recurring consumables, regulatory barriers, and stable demand in chronic respiratory care.

Jet nebulizers remain a cost-effective solution in respiratory therapy, particularly in emerging markets and public healthcare systems. Although ultrasonic and mesh nebulizers are gaining popularity, jet nebulizers maintain strong demand due to lower price points, robust performance, and compatibility with a wide range of medications.

This report studies the global Jet Nebulizer production, demand, key manufacturers, and key regions.
