Jet Trenching ROV (Remotely Operated Vehicle) is an underwater robotic vehicle specifically designed for performing trenching operations in various offshore environments. It utilizes high-pressure water jets or water-based cutting systems to excavate and create trenches on the seabed. Jet Trenching ROVs are typically equipped with multiple thrusters for maneuverability, hydraulic arms for precise control, and a range of sensors and cameras to provide real-time feedback to the operator. These ROVs are commonly used in the oil and gas industry for laying subsea cables, pipelines, and other underwater infrastructure.
