Jet type automatic fire water cannon is a fire-fighting equipment that can automatically spray water to extinguish fires. It consists of a field control box, an electric valve, a gun body, a decoding box, a UV detector and other components. Among them, the gun body is the main component of water spraying fire extinguishing, and the UV detector is responsible for detecting fire signals. When a fire occurs, the algorithm program inside the water cannon will analyze and identify the signal picked up by the flame sensor, and realize automatic tracking and positioning, water spraying and linkage alarm through stepper drive control.

Jet type automatic fire water cannon has the characteristics of fast response speed, high fire extinguishing efficiency and high degree of automation. The installation height is usually more than 6 meters. It is suitable for various large space places, including airport terminals, high-speed rail stations, bus stations, railway stations and other passenger and freight centers, museums, gymnasiums, science and technology museums, opera houses, cinemas and other cultural and educational entertainment centers, textile, steel, metallurgy, medicine, wood and other industrial production plants and warehouses, coal-fired power generation, natural gas power generation, garbage

power generation and other power plants and chemical plants, etc.
