Abstracts

Sawtooth wave jig is revised and manufactured, based on the stratified theory and the adequate analysis of other conventional jigs. The jiggling pulsation curve?-produced by sawtooth wave jig?-is in the shape of sawtooth wave which makes upward water flow quicker than downward water flow. The feature that upward time is shorter than downward time solves the problem that time and action of upward/downward water flows. This breakthrough dramatically amplifies the loose degree and mitigates suction action, which facilitates precipitation of coarse ores and improves ore recovery rate.

SCOPE OF THE REPORT:

Both jigs and fixtures are used in manufacturing. If you want to produce interchangeable parts, you will need to use a jig, fixture, or both depending on the operation. Human error is vastly limited, so components can be machined quickly with high levels of accuracy, which reduces costs. Jigs are a type of fixture that guides and supports a tool, whereas a fixture is used to secure a workpiece to be worked on.

The worldwide market for Jig is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.

This report focuses on the Jig in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
