## Abstracts

According to our (Global Info Research) latest study, the global JIW Wafers market size was valued at US\$ 380 million in 2025 and is forecast to a readjusted size of US\$ 563 million by 2032 with a CAGR of 5.9% during review period.

JIW Wafers are a type of semiconductor substrate designed to provide electrical isolation between different components on the same wafer. This isolation is achieved through pn junctions, which act as barriers to current flow between neighboring regions. Unlike Silicon-On-Insulator (SOI) wafers, JIW relies on junction-based isolation rather than an insulating oxide layer.
