## Abstracts

According to our (Global Info Research) latest study, the global Joint Cement Spacer Mold market size was valued at USD 732.6 million in 2023 and is forecast to a readjusted size of USD 1124.8 million by 2030 with a CAGR of 6.3% during review period.

The spacer molds are intended for use in patients undergoing two-stage revision knee surgery for an infected total joint. In the case of infected revision interventions, all implant components are usually removed during the two-stage surgery, and the resulting joint spaces are filled with intraoperatively prepared pads or spacers made of bone cement. The spacers, which are loaded with antibiotics, are usually formed by hand and are generally not allowed to passively mobilize in the patient since the surfaces of the articulating spacers are incongruent and not smooth enough. After successful healing of the infections, these spacers are removed in a second surgery and replaced with new implant components.
