Abstracts

The global Joint Cement Spacer Mold market size is expected to reach \$ 1124.8 million by 2030, rising at a market growth of 6.3% CAGR during the forecast period (2024-2030).

The spacer molds are intended for use in patients undergoing two-stage revision knee surgery for an infected total joint. In the case of infected revision interventions, all implant components are usually removed during the two-stage surgery, and the resulting joint spaces are filled with intraoperatively prepared pads or spacers made of bone cement. The spacers, which are loaded with antibiotics, are usually formed by hand and are generally not allowed to passively mobilize in the patient since the surfaces of the articulating spacers are incongruent and not smooth enough. After successful healing of the infections, these spacers are removed in a second surgery and replaced with new implant components.

This report studies the global Joint Cement Spacer Mold production, demand, key manufacturers, and key regions.
