Abstracts

The global Joint Connector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The advantages of joint connectors are that they can withstand greater pressure and load, are resistant to high temperatures and have good corrosion resistance. At the same time, the joint connector can use different materials and sealing structures according to different usage environments, media and working conditions.

The joint connector is a pipe connecting element, usually composed of a sleeve and a flange. The sleeves are connected to each other through bolt tightening to realize the connection of pipelines. Joint connectors are typically used in piping systems with larger diameters and higher operating pressures.
