### SCOPE OF THE REPORT:

This report studies the Joint Reconstruction market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Joint Reconstruction market by product type and applications/end industries.

In total hip replacement, physicians replace the damaged bone and cartilage with prosthetic components. They remove the damaged femoral head and place a metal stem into the hollow center of the femur. They then use a metal or ceramic ball to replace the femoral head. They replace the damaged cartilage lining the acetabulum with a metal socket, holding it in place with screws or cement. Surgeons then place a plastic, ceramic, or metal spacer between the prosthetic ball-and-socket surfaces to provide a smoothly gliding surface. Total knee replacement involves resurfacing the bones. Physicians replace the damaged cartilage at the ends of the femur and the tibia, as well as a small amount of underlying bone, with metal components that re-create the surface of the bone. In some cases, they resurface the underside of the patella with a plastic disk. They insert a plastic spacer between the metal pieces to create a smoother surface.
