The global Jury Management Solution market size is expected to reach \$ 783 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

The Jury Management Solution is a comprehensive software platform designed specifically for court systems. It automates the entire lifecycle management of jurors, including candidate selection, eligibility screening, notification scheduling, attendance records, payroll disbursement, and data analysis. The system typically integrates interfaces with voter registration databases, court case systems, and communication platforms (SMS/email), supporting multi-channel notifications, online questionnaires, electronic check-in, scheduling management, and compliance report generation. This system addresses the problems of cumbersome manual operations, delayed notifications, data inconsistencies, and high compliance risks inherent in traditional jury management, significantly improving court administrative efficiency, juror satisfaction, and judicial transparency. It is particularly suitable for the digital transformation needs of medium to large-sized judicial jurisdictions.
