A vortex flowmeter is an instrument that measures the volume flow of gases, liquids or steam. It measures flow based on the vortex forces in the fluid. The vortex flowmeter has the characteristics of small pressure loss, large measuring range, high precision, and low maintenance. It is suitable for flow measurement of industrial pipeline medium fluids. The output signal type and measurement range of the vortex flowmeter can be flexibly selected for different application scenarios. The vortex flowmeter needs to pay attention to the installation requirements and pipeline conditions during use to ensure its normal operation.
