According to our (Global Info Research) latest study, the global Kegerators market size was valued at USD 1082.8 million in 2023 and is forecast to a readjusted size of USD 1418.5 million by 2030 with a CAGR of 3.9% during review period.

A kegerator is a refrigerator that has been designed or altered to store and dispense kegs. By keeping the keg in a refrigerated environment and using CO₂ to pressurize and dispense the keg, it will allow the contents to remain fresh and carbonated for an extended period of time, generally a couple of months.

Specifically designed kegerators are available for both commercial and residential use, however a common refrigerator can be reconfigured into a kegerator with a kegerator conversion kit. Not all standard refrigerators have enough room for a keg, so kegerators are designed in a manner that will allow one or more kegs to fit inside along with the dispense system. Kegerators are typically used to dispense draft beer, but are also gaining popularity for dispensing wine, cold brew coffee and kombucha with certain modifications.
