## Abstracts

The global Keratin Complex Protein market size is expected to reach \$ 127.8 million by 2029, rising at a market growth of 4.9% CAGR during the forecast period (2023-2029).

Keratin is one of structural protein composing our stratum corneum, hair and nail. Specially it comprises 80% of human's hair. In terms of its amino acid composition, it has cystine which rarely seen in any other kinds of protein. In association with disulfide bond, it has very unique molecular structure that peptide is well cross-linked. Because of this structure, much functional end group such as amino groups and carboxyl groups exist within a single molecule. Consequently, high adsorption can be arose from keratin. It gives hair strength and body.
