Abstracts

According to our (Global Info Research) latest study, the global Kerr Microcavity Frequency Comb market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The Kerr microcavity optical frequency comb is a frequency comb generator based on the Kerr effect and optical microcavity technology. It uses the strong entanglement effect of the optical microcavity on the light beam, combined with the Kerr effect (that is, the refractive index of the medium changes with the light intensity) to achieve the formation of the frequency comb. Specifically, when the light beam is coupled into the optical microcavity and reflected multiple times in the microcavity, due to the existence of the Kerr effect, the propagation of light in the microcavity will cause a nonlinear change in the refractive index of the medium, which in turn causes the frequency expansion of the standing wave mode, and finally forms a comb frequency spectrum.

Global key players of Optical Frequency Combs (OFC) include Menlo Systems, IMRA America, TOPTICA, etc. The top three players hold a share about 51%. North America is the largest market, and has a share about 34%, followed by Europe and China with share 29% and 23%, separately. In terms of product type, Based on Femtosecond Mode-locked Lasers is the largest segment, accounting for a share of 97%. In terms of application, Scientific Research is the largest field with a share about 93 percent.
