Abstracts

According to our (Global Info Research) latest study, the global Ketoconazole Cream market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Ketoconazole cream is a broad-spectrum antifungal drug with ketoconazole as its main ingredient. It treats skin problems caused by fungal infections such as tinea manuum, tinea pedis, tinea corporis, tinea cruris, tinea versicolor, and cutaneous candidiasis by inhibiting fungal growth. It can effectively kill a variety of skin fungi and yeasts. However, care should be taken to avoid contact with the eyes when using it. It is contraindicated for those who are allergic to this product and should not be used on large areas.

In 2024, the global production of ketoconazole cream was 92.71 million units, with an average price of US\$0.7 per unit. Gross profit margins typically range from 40% to 60%.

The upstream supply chain of ketoconazole cream mainly consists of chemical raw material companies and excipient suppliers, including ketoconazole raw materials, cream base, stabilizers, and packaging materials. The upstream sector is characterized by large-scale and mature operations, with cost fluctuations influenced by raw material chemical prices and regulatory compliance costs, but overall supply is sufficient. The downstream sector is more crucial, primarily encompassing hospitals and retail pharmacies, as well as online drug retail platforms. Prescription demand is influenced by hospital antifungal medication guidelines, medical insurance catalogs, and competition from clinical alternatives, while OTC demand relies on consumer self-purchase demand, brand awareness, and channel coverage. Fungal skin diseases have a high prevalence and recurrence rate globally and in China, ensuring stable

downstream demand. Branded drugs and cost-effective generic drugs coexist, with terminal competition focusing on dosage form improvements, reduced skin irritation, and increased accessibility.

Future development trends mainly include increased consumer awareness of self-skin care, continued expansion of OTC channels, and a trend towards more convenient and gentler dermatological medications. New channels, represented by online retail, will continue to improve product accessibility and drive product structure evolution towards branding and differentiation. The driving factors stem from the sustained demand resulting from the stable prevalence and high recurrence rate of fungal infections, as well as the preference for high-quality products following the increasingly standardized regulation of topical dermatological medications. Meanwhile, improvements by companies in cream bases, absorption rates, and skin barrier friendliness are also enhancing product competitiveness. The main obstacles include the strong availability of substitutes for topical antifungal drugs, such as terbinafine and clotrimazole; furthermore, the perception that safety controversies surrounding oral ketoconazole formulations extend to topical formulations in some countries, requiring brands to be more cautious in their advertising. Continued price competition at the retail level may also compress profit margins for branded companies.
