Abstracts

The global Kidney Stone Management Device market size is expected to reach \$ 7932 million by 2032, rising at a market growth of 9.0% CAGR during the forecast period (2026-2032).

Kidney Stone Management Devices include extracorporeal shock wave lithotripsy (ESWL) systems, ureteroscopes, percutaneous nephrolithotomy (PCNL) equipment, laser lithotripters, stone retrieval tools, and related consumables used in minimally invasive urology. In 2025, the global average blended device value?including durable equipment, flexible scopes and consumables?is approximately US\$13,500 per unit, with worldwide shipments reaching about 312,000 units. Gross margin ranges from 32%?58%, depending on laser systems, flexible ureteroscopes, disposables and after-sales service. Upstream components include shock wave generators, fiber lasers, optics, CMOS imaging, steerable scopes and medical-grade polymers; midstream manufacturers provide assembly, sterilization compatibility, imaging integration and clinical validation; downstream users include hospitals, urology centers, ambulatory surgical centers, outpatient stone clinics and emergency departments dealing with acute renal colic.

Kidney stone management is rapidly shifting toward minimally invasive and disposable technologies. Flexible ureteroscopes and high-power pulsed lasers (Ho:YAG and new-generation Thulium Fiber Lasers) are replacing large ESWL systems in many markets. Growth is also driven by increasing stone recurrence rates and wider adoption of outpatient lithotripsy. Consumables?especially disposable ureteroscopes and laser fibers?will remain key drivers of revenue expansion through 2031.
