Abstracts

Kiln dried firewood is firewood that has been dried in a kiln, which is a type of oven or furnace used for drying wood. This process removes moisture from the wood, making it burn more efficiently and produce less smoke and creosote. Kiln dried firewood typically has a moisture content of less than 20%, compared to air-dried firewood which can have a moisture content of 30% or more. This makes kiln dried firewood a popular choice for use in fireplaces, wood stoves, and outdoor fire pits.

According to our (Global Info Research) latest study, the global Kiln Dried Firewood market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
