## **Abstracts**

Kinase inhibitors are considered as specific enzymes that help in preventing the process of cell division and the growth of cancerous cells. The kinase inhibitors are easy to use and are handy while treating cancer patients by blocking the signals that alert the cancer cells to grow. With the help of research and development activities in the cancer treatments, several innovations, and advanced therapeutics have been introduced. However, the results of these drugs and treatments are considered partial, palliative, and unpredictable at times.
