## Abstracts

The global Konjac Ceramide market size is expected to reach \$ 86.20 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

In 2025, global konjac ceramide production reached approximately 3510 tons, the average price is usd/ton. Konjac ceramide is a ceramide extracted from konjac tubers and used as a dietary supplement to improve dry skin.

### Market Concentration and Key Players:

Internationally, Konjac ceramide market concentration is relatively high, mainly concentrated in Europe, America and Japan developed countries. For example, Denso and Smart Eye and other large manufacturers; from the domestic point of view, Konjac ceramide manufacturers are Shaanxi Yuanbang and Yuchen Biology.

### Manufacturing Processes and Market Trends:

The core of the manufacturing process of konjac ceramide is to extract and purify ceramide components efficiently from konjac tubers or their by-products. The key link lies in the adoption of advanced extraction technology to achieve high purity and activity. Current mainstream extraction methods include supercritical CO<sub>2</sub> fluid extraction technology, which can effectively obtain high purity ceramide by extracting at specific temperature and pressure. In addition, ethanol reflux extraction combined with column chromatography purification is also a common process, which can prepare ceramide products with purity over 95% from raw materials such as konjac fly powder. The manufacturing process usually involves precise control of parameters such as temperature, time, solvent ratio, etc. to optimize extraction efficiency, and qualitative

and quantitative analysis of products using HPLC-ELSD methods to ensure quality control.

The current Konjac ceramide market is showing a steady growth trend, with the global market size reaching a considerable level in 2023 and expected to continue to expand at a high compound annual growth rate in the coming years. The market growth is mainly driven by strong demand for natural active ingredients in the skin care and personal care industries, especially in the high-end skin care and functional health food sectors. China plays an important role in this market, both in raw material supply and production and processing, and its domestic market size is also expanding rapidly. The future development trend tends to further technological innovation to improve product purity and reduce production costs. Meanwhile, the application field is expected to expand from cosmetics to health care products and medicines. Industrial chain integration and international development will be the key driving force for the industry to advance.
