According to our (Global Info Research) latest study, the global Kresoxim Methyl market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Kresoxim methyl is a chemical compound from the group of strobilurin, which is an active ingredient in plant protection. It is used as a fungicide, which protects plants from scab and other fungal diseases. Some of the common plants on which kresoxim methyl is used as a fungicide are apples, grapes, pears, cucurbit vegetables, and others. Use of this fungicide inhibits the growth of mildews, blast, and sheath blight.

Rise in the number of diseases in plant is the key driver of the kresoxim methyl market. In addition, kresoxim methyl is preferred over the other fungicides, owing to its protective, curative, eradivative action, and long residual effects. However, complications related to handling of the chemical restrains the market growth, as kresoxim methyl is a toxic chemical.
