Abstracts

The global Krill Protein Powder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Krill meal is a protein meal made from Antarctic krill (*Euphausia Superba*) caught in cold-water oceans and used in aquaculture, primarily to feed shrimp and fry. Krill is a completely natural food source for fish, as it, together with phytoplankton, is the cornerstone of the marine food chain. It is used in feeds because of its lure effect and excellent content. It is a well-digested, high-protein product, rich in essential amino acids, and a significant content of ?3 fatty acids and astaxanthin. (The latter is a vitamin A precursor and has an antioxidant effect.)
