## Abstracts

According to our (Global Info Research) latest study, the global KSK7653 market size was valued at US\$ 29.33 million in 2025 and is forecast to a readjusted size of US\$ 321 million by 2032 with a CAGR of 24.1% during review period.

In 2025, global HSK7653 production reached approximately 180,000 units. HSK7653, with the generic name Cofogliptin, is a new type of dipeptidyl peptidase 4 (DPP-4) inhibitor antidiabetic drug independently developed by a domestic enterprise with independent intellectual property rights. By specifically inhibiting the activity of DPP-4 enzyme, this drug prolongs the action time of endogenous incretins in the body, thereby promoting insulin secretion, inhibiting glucagon release, achieving stable regulation of blood glucose, and is not prone to causing adverse reactions such as hypoglycemia. As an oral antidiabetic drug, HSK7653 features convenient administration and good tolerability. It is mainly used for the treatment of type 2 diabetes, which can effectively improve the blood glucose control level of patients, provide a safe and efficient treatment option for patients with type 2 diabetes, and at the same time promote the independent innovation and development of the domestic antidiabetic drug field.

HSK7653 (generic name: Cofogliptin), as the world's first ultra-long-acting dipeptidyl peptidase 4 (DPP-4) inhibitor, occupies a differentiated competitive position in the field of type 2 diabetes treatment by virtue of its unique advantage of biweekly oral administration, showing significant market development potential. As an innovative drug independently developed by a domestic enterprise, this drug has complete independent intellectual property rights, breaking the long-term monopoly of imported DPP-4 inhibitors in the market and conforming to the development trend of independent innovation in the domestic antidiabetic drug field. Its mechanism of action has the characteristics of glucose-dependent 'intelligent hypoglycemia', with good safety and

tolerability, no obvious risk of hypoglycemia and neutral impact on body weight. It is suitable for special patient groups such as the elderly and those with renal insufficiency, with a wide range of clinical application scenarios and continuously improving recognition. At present, the global DPP-4 inhibitor market is in a stage of steady development, with both competition between imported original drugs and domestic generic drugs, as well as differentiated breakthroughs of new ultra-long-acting preparations. Relying on its core advantage of ultra-long-acting administration, HSK7653 is different from traditional daily and weekly preparations, effectively improving patient medication adherence and forming unique market competitiveness. With the advancement of medical insurance access, further exploration of clinical indications and expansion of combination therapy regimens, the market penetration of this drug will continue to strengthen. At the same time, relying on the cost and channel advantages of domestic innovative drugs, it will gradually expand its market coverage, which is expected to seize more market share in the fierce market competition, help reshape the pattern of the domestic DPP-4 inhibitor market, provide a more convenient and safe treatment option for patients with type 2 diabetes, and promote the diversified development of the domestic antidiabetic drug market.
