Abstracts

According to our (Global Info Research) latest study, the global KTP Laser market size was valued at US\$ 273 million in 2025 and is forecast to a readjusted size of US\$ 424 million by 2032 with a CAGR of 6.4% during review period.

A KTP laser is a solid-state laser system that uses a potassium titanyl phosphate (KTP) crystal as a frequency-doubling medium to convert 1064 nm Nd:YAG laser output into 532 nm green laser light. It is characterized by concentrated energy delivery, high tissue absorption, and effective hemostasis, making it widely used in medical, aesthetic, and industrial applications. The core structure typically includes an Nd:YAG laser source, KTP frequency-doubling crystal, optical resonator cavity, energy control system, and cooling system.

Upstream includes Nd:YAG laser crystals, KTP nonlinear optical crystals, diode pump sources, precision optical lenses and coated components, and power control circuits. Downstream applications include hospital specialty departments such as ENT and urology, aesthetic medical institutions, and certain precision processing fields. The overall industry gross margin generally ranges from 45% to 65%, with higher margins for medical-grade and high-stability models.

In 2025, the global production of KTP lasers was 8,300 units, with an average price of US\$32,000 per unit.
