## Abstracts

The global L-Ergothioneine (EGT) market size is expected to reach \$ 407 million by 2032, rising at a market growth of 26.5% CAGR during the forecast period (2026-2032). L-Ergothioneine (EGT) is a naturally occurring amino acid and is a thiourea derivative of histidine, containing a sulfur atom on the imidazole ring. This compound is made in relatively few organisms, notably Actinobacteria, Cyanobacteria, and certain fungi. L-Ergothioneine (EGT) is a rare natural chiral amino acid with unique cell physiological protection functions such as scavenging free radicals, detoxification, maintaining DNA biosynthesis, normal cell growth, cell immunity, radiation resistance, whitening and anti-aging. Ergothioneine has broad application prospects in the food, cosmetics, functional food and biomedicine industries. In 2025, global L-Ergothioneine (EGT) sales reached approximately 3,271.4 Kg, with an average price of 23.4 US\$/g.

The market for L-Ergothioneine (EGT) is primarily driven by the growing demand for natural antioxidants and anti-aging ingredients across the nutraceutical, functional food, and cosmetic industries. Increased consumer awareness of oxidative stress-related diseases and the desire for preventive healthcare have fueled interest in EGT's potent cytoprotective and anti-inflammatory properties. Additionally, scientific research highlighting EGT's role in cellular protection and mitochondrial function has boosted its credibility and adoption in high-end supplements and skincare formulations. The shift toward clean-label, plant-based, and scientifically backed wellness products further supports the expansion of the EGT market globally.

This report studies the global L-Ergothioneine (EGT) production, demand, key manufacturers, and key regions.
