Abstracts

The global Lathe Bit market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A lathe bit, or brazed bit, is a tool used in lathe turning, notable for its cutting-edge brazed to the body. Unlike disposable bits with separate blades and bodies, lathe bits feature a one-piece construction. Before use, they require shaping by sharpening the cutting edge, typically with a grinder or tool grinder. The blade can be customized to various machining conditions and reshaped after wear.
