According to our (Global Info Research) latest study, the global Laboratory Balances market size was valued at USD 780.9 million in 2023 and is forecast to a readjusted size of USD 958.2 million by 2030 with a CAGR of 3.0% during review period.

Lab balance is a class of balance designed to measure small mass in the sub-milligram range.

A top loading balance (also referred to as top loader balance) is among the most common types of weight measuring scales used in the laboratory. Top loading balances are available in a variety of sizes and weight capacities, from 20 g to 64.1 kg.

The measuring pan of an analytical balance (0.7 mg or better) is inside a transparent enclosure with doors so that dust does not collect and so any air currents in the room do not affect the balance's operation.

The industry's leading producer is Mettler Toledo? which accounted for 44% of revenue. United States is the largest market, with a share about 32%, followed by Europe and China with the share about 30% and 10%. In terms of product, analytical balance is the largest segment, with a share about 66%. And in terms of application, the largest application is research center, followed by university.
