Abstracts

According to our (Global Info Research) latest study, the global Laboratory Colorimeter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A laboratory colorimeter, also referred to as a digital colorimeter, is an instrument used to measure the absorbance of wavelengths of light at a particular frequency (color) by a sample. Digital colorimeters are widely used across different work areas including, environmental testing, clinical diagnostics, pharmaceutical analysis, and biochemistry. In particular, a portable colorimeter can be used for on-site environmental analyses. Similar to spectrophotometers, laboratory colorimeters are used to determine the concentration of a known solute in a sample since the concentration of a solute is proportional to the absorbance. The wavelength filter used is very important since the wavelength of light that is transmitted by the colorimeter has to be same as that absorbed by the sample.
