According to our (Global Info Research) latest study, the global Laboratory Construction Services market size was valued at US\$ 66906 million in 2025 and is forecast to a readjusted size of US\$ 94511 million by 2032 with a CAGR of 5.0% during review period.

Laboratory construction services are comprehensive engineering services for research institutions, universities, hospitals, and corporate R&D centers. Their core objective is to transform an empty space into a professional laboratory environment that meets specific research or testing needs. It is not simply home renovation, but a highly integrated and professional systems engineering project encompassing the entire lifecycle from initial consultation, planning and design, construction, equipment configuration, system commissioning, to subsequent operation and maintenance. We assemble a team of experienced engineers, employ advanced technical standards, and strictly control engineering quality and safety regulations to provide end-to-end solutions for biomedical, research institutions, and universities, ensuring the safe and efficient operation of laboratories.

Laboratory construction services typically include the following core modules: First, preliminary consultation and planning, determining the laboratory's functional positioning, layout, and special needs based on the client's research direction (such as biomedicine, chemical synthesis, physical testing, or electronic detection); second, engineering design and construction, involving professional engineering such as laboratory layout, ventilation and air conditioning (HVAC) systems, water supply and drainage systems, electrical systems, gas supply systems, and cleanliness control; third, equipment and furniture configuration, including laboratory furniture such as lab

benches, fume hoods, safety cabinets, and clean benches, as well as the selection and installation of supporting equipment such as pure water systems and constant temperature and humidity systems; and fourth, acceptance and operation and maintenance, conducting testing and verification of various performance indicators after project completion, and providing long-term maintenance and technical support services.
