According to our (Global Info Research) latest study, the global Laboratory Digestion System market size was valued at USD 188.1 million in 2023 and is forecast to a readjusted size of USD 284.3 million by 2030 with a CAGR of 6.1% during review period.

Laboratory Digestion System is a device for digestion treatment. In the determination of inorganic elements in environmental samples (water samples, soil samples, solid waste and particulate matter intercepted during atmospheric sampling, etc.), the environmental samples need to be digested. The function of the digestion treatment is to destroy organic matter, dissolve particulate matter, and oxidize various valence states to be measured into a single high valence state or convert it into easily decomposable inorganic compounds.

The top two players in the global laboratory digestion system market are CEM Corporation and Milestone Srl, with approximately 30% market share. The United States is the world's largest consumer, with a 35 percent share of the market. Microwave digestion system is the main type of product market, accounting for about 80%.
