Abstracts

A laboratory information system is a software system that records, manages, and stores data for clinical laboratories. A LIS has traditionally been most adept at sending laboratory test orders to lab instruments, tracking those orders, and then recording the results, typically to a searchable database. The standard LIS has supported the operations of public health institutions and their associated labs by managing and reporting critical data concerning 'the status of infection, immunology, and care and treatment status of patients.

SCOPE OF THE REPORT:

The important driver increasing the growth in the global laboratory information systems market is the increasing demand from emerging economies. Growing awareness of the laboratory information system in the emerging economies is driving the market. A rise in aging population in the developing countries but the lack of qualified and skilled technicians have forced the government to establish laboratory information system. The growing aging population with health issues such as diabetes, osteoporosis and much more are demanding increased treatments and thus add value to the growing number of hospitals, consequently driving the demand for hospitals and physicians.
