According to our (Global Info Research) latest study, the global Laboratory Isolators market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Compounding Aseptic Isolator (CAI) and Compounding Aseptic Containment Isolator (CACI) are alternative containment cabinets to Biological Safety Cabinets (BSCs) to be used in scientific laboratories. These close isolators provide a better physical barrier to protect the health of laboratory workers, maintain the sterility of experimental materials, and prevent the contamination of the environment. Closed containment cabinets are safer to use in research laboratories to provide a clean work environment, prevent exposure of laboratory personnel, prevent aerosol contamination, avoid pathogenic microorganisms to escape or enter the cabinet, prevent cross-contamination of experiments, and protect the environment.
