Laboratory Plasticware is the set of Consumables used in laboratories, made of different types of plastic material. Primarily, the lab wares are manufactured using glass materials because of certain physical characteristics. Some of the plasticware may include Plastic Beaker, Plastic Bottle, Plastic Pipettes, etc.

Laboratory plastic consumables have the following advantages:

- (1) good mechanical properties and chemical stability;
- (2) Its raw materials supply is sufficient, low price, suitable for making disposable products, to avoid the traditional materials caused by repeated use of disinfection and infection problems;
- (3) Plastic is easy to modify so as to produce hydrophilic products and hydrophobic products to meet specific test needs. Plastic products are widely used in the field of laboratory consumables.

Global key players of Laboratory Plastic Wares include Thermo Fisher Scientific, Corning, Greiner Bio-One, Kartell and Sarstedt, etc. Top three players occupy for a share about 25%. North America is the largest market, with a share about 30%, followed by China and Europe. In terms of material, Polyethylene (PE) is the largest
