According to our (Global Info Research) latest study, the global Laboratory Rat and Mice Cages market size was valued at US\$ 258 million in 2024 and is forecast to a readjusted size of USD 474 million by 2031 with a CAGR of 9.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Laboratory rat and mice cages are closed or semi-closed habitats designed for experimental animals to meet the needs of animal welfare, sanitary barriers, and experimental repeatability. These cages are usually made of chemically resistant and autoclavable polycarbonate or stainless steel, equipped with a variety of ventilation and filtration systems to ensure air quality and biosafety. Depending on the experimental needs, open grid cages, filter-top cages, static micro-isolator cages, hanging cages, single-cage ventilation systems, or special-purpose cages can be selected, supplemented by environmental enrichment facilities. Standardized cage size and layout, supporting cage rack systems, and strict cage replacement and cleaning procedures are the basic conditions for achieving laboratory animal health, normal behavior, and data reliability.

The specifications of laboratory rat and mice cages are subdivided into plastic and metal. The price range is US\$12.88/piece---US\$57.56/piece, and the core applications are schools, research institutions, and pharmaceutical companies. As of April 2025, the main development trends of the industry are the growing R&D expenditure, the development of personalized medicine and biotechnology. The global market size in

2024 is US\$251.06 million. The CAGR in the past five years is 9.24%. The production companies are mainly distributed in Europe, America, and Asia. The main consumption areas are North America, Europe, Asia, and other parts of the world. The upstream raw materials of laboratory rat and mice cages are mainly plastic and stainless steel. The main production equipment is wire drawing machine, shearing machine, and bending machine. Judging from the development in the past three years, with the advancement of medicine and the growth of demand for new therapies, the development has been relatively rapid. The import ratio is about 31%, and there is a great opportunity for domestic substitution.
