Abstracts

The global Lac Extract market size is expected to reach \$ 59 million by 2030, rising at a market growth of 3.9% CAGR during the forecast period (2024-2030).

Lac Extract comes from the scale insect lac found in India, Southeast Asia, Nepal, Myanmar, Bhutan and southern China. Lac is found in the wild and is also cultivated artificially. Female lac bugs invade the host tree and the insects secrete a resin that covers their colonies. When harvested, the covering falls off the branches and is called lac. This resin is used to make shellac. The dye had to be extracted from the lac stick before it could be used to dye cloth.
