And in terms of product Application, the largest application is Hospitals, followed by Clinics.

The Lacrimal Duct Stent System is a medical device used to treat blocked or narrowed tear ducts. The lacrimal duct is the passageway for the drainage of fluid inside the eye. It connects the eye to the nasal cavity and drains tears from the corner of the eye. When the tear duct is blocked or narrowed, tears cannot drain properly, causing tears to pool in the eye, which can lead to problems such as discomfort, infection, or conjunctivitis.

A lacrimal stent system restores the normal drainage of tears by implanting a flexible duct or stent. These stents can usually be left in the tear duct for a period of time until the blockage or narrowing of the tear duct is resolved.
