Abstracts

Lactase enzymes are produced by microorganisms and are an essential catalyst, which helps to break down lactose among consumers with lactose tolerance. Lactase enzymes can be added to food products, beverages, dietary supplements, and pharmaceutical products in dry or liquid form.

According to our (Global Info Research) latest study, the global Lactase Enzyme market size was valued at USD 1025.5 million in 2022 and is forecast to a readjusted size of USD 1369.6 million by 2029 with a CAGR of 4.2% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Lactose intolerance continues to persist as a major concern among the world's adult population, with nearly 75% unable to consume milk and its derivatives. The advent of lactase enzyme, such as β -galactosidase, has emerged as a boon for dairy producers, as it hydrolyzes lactose to readily digestible sugars such as galactose and glucose. The recent surge in number of consumers shifting towards lactose-free dairy products is making a huge impact on the dynamics of the lactase enzyme market.
