Abstracts

According to our (Global Info Research) latest study, the global Lactobacillus Supplement market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Lactic acid bacteria can be generally divided into two categories. One is animal derived lactic acid bacteria, the other is plant derived lactic acid bacteria. Because the animal source is from animals, because the strain is often in a relatively unstable state, its biological efficacy is also relatively unstable, and when consumed in large quantities, it is easy to cause human animal protein allergy, that is, rejection reaction. However, lactic acid bacteria from plants are easy to be recognized by the human body. No matter how much they are ingested, the human body will not produce allogenic protein rejection. Moreover, lactic acid bacteria from plants are more active than those from animals, and can reach the human small intestine for colonization 8 times more than those from animals, thus exerting its powerful and stable biological effects.
