Abstracts

According to our (Global Info Research) latest study, the global Lactose market size was valued at USD 1064.1 million in 2023 and is forecast to a readjusted size of USD 1297.2 million by 2030 with a CAGR of 2.9% during review period.

Food grade lactose is produced by concentrating whey or permeate (a co-product of whey protein concentrate production) to supersaturate the lactose, then removing and drying the lactose crystals. Special processes of crystallization, as well as grinding and fractionated sifting, produce types of lactose which differ in particle size distribution. Industrial grade lactose describes a range of lactose products used in feed, fermentation and technical applications. Pharmaceutical grade lactose is produced by concentrating whey or permeate (a co-product of whey protein concentrate production) to over-saturate the lactose, then removing, refining, drying and milling the lactose crystals. Pharmaceutical grade lactose is produced to meet rigid specifications, such as specific form and size distribution, monohydrate, crystalline, 40 mesh to 325 mesh, and a spray-dried mixture of crystalline and amorphous lactose for all applications.
