## Abstracts

According to our (Global Info Research) latest study, the global Lambskin Condom market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A condom is a sheath-shaped barrier device, used during sexual intercourse to reduce the probability of pregnancy or a sexually transmitted infection (STI). There are both male and female condoms. Their use greatly decreases the risk of gonorrhoea, chlamydia, trichomoniasis, hepatitis B, and HIV/AIDS. They also to a lesser extent protect against genital herpes, human papillomavirus (HPV), and syphilis.

Condoms made from sheep intestines, labeled 'lambskin', are available. Although they are generally effective as a contraceptive by blocking sperm, it is presumed that they are likely less effective than latex in preventing the transmission of agents that cause STDs, because of pores in the material. Some believe that lambskin condoms provide a more 'natural' sensation, and they lack the allergens that are inherent to latex.
