According to our (Global Info Research) latest study, the global Laminated Core Power Transformers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A power transformer converts AC mains power at a nominal frequency of 400 Hz or less and contains galvanically isolated primary and secondary windings. A laminated core power transformer builds it from a set of metal plates bonded together rather than using a monolithic block of iron. This has the desired effect of increasing the electrical resistance within the core and thus reducing current flow, loss of efficiency and waste of heat.
