Abstracts

The global Laminated Core Power Transformers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A power transformer converts AC mains power at a nominal frequency of 400 Hz or less and contains galvanically isolated primary and secondary windings. A laminated core power transformer builds it from a set of metal plates bonded together rather than using a monolithic block of iron. This has the desired effect of increasing the electrical resistance within the core and thus reducing current flow, loss of efficiency and waste of heat.

This report studies the global Laminated Core Power Transformers production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Laminated Core Power Transformers, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Laminated Core Power Transformers that contribute to its increasing demand across many markets.
